A tool to help policy makers see how the timing and intensity of different social distancing interventions can impact COVID-19 in each state.

United States: Urgent need to address rise in new cases  
July 2, 2020

NEW COVID-19 CASES EACH DAY

If we continue with current level of reopening in each state

If we implement stay at home orders in states where daily cases are increasing.

If we do not change course, the United States will surpass 100K new cases per day by the end of August.

- Continuing with reopening now will create a dramatic increase in the new COVID-19 cases per day.
- Implementing stay at home orders again soon can significantly reduce the number of new cases per day.
- If we don’t reverse course now, ICU bed capacity could be overwhelmed by the end of the summer.
